PROFESSIONAL SUMMARY

Senior Front-End Engineer with 9 years of professional software-development experience, specializing in Angular (through Angular 20), TypeScript, RxJS, scalable front-end architecture, reusable component and shared-library design, performance optimization, responsive UI development, and automated testing. Since 2020, I have worked remotely with U.S.-based Capstone Logistics on enterprise logistics platforms used across 600+ locations, contributing to feature analysis, technical design, estimation, architectural decisions, mentoring, and cross-functional technical leadership.

Strong hands-on experience with AI-assisted and agentic software engineering, including custom multi-agent workflows, reusable AI skills, TDD/review/verification workflows, context handoffs, and LLM API integrations. Experienced using modern AI tools as part of implementation, debugging, architecture analysis, testing, research, and code review.

PROFESSIONAL EXPERIENCE

Senior Front-End Engineer (Angular)

[Capstone Logistics](#) | Jan 2020 - Present | Remote

- Design and develop enterprise Angular applications including Managed Receiving and Yard Management, supporting logistics and warehouse operations across 600+ locations.
- Contribute to front-end architecture through reusable application patterns, shared component libraries, complex forms, data-heavy tables, reactive data flows, and scalable Angular/RxJS design.
- Drove and contributed to performance optimization initiatives that reduced application load times by approximately 60-70%, alongside client/API efficiency improvements.
- Participate in dedicated pre-sprint feature analysis, technical design, and estimation sessions using story points and T-shirt sizing to evaluate approaches, dependencies, complexity, and trade-offs.
- Act as a frontend technical point of contact by making technical decisions, resolving complex implementation problems, unblocking developers, and representing frontend concerns with Product, .NET backend, QA, and UX teams.
- Conduct code reviews and mentor 3 junior/associate front-end engineers on Angular architecture, maintainability, debugging, testing, and engineering best practices.
- Build unit- and end-to-end-tested functionality using Jasmine and Cypress, and contribute to Azure DevOps CI configuration when frontend pipeline changes are required.
- **Managed Receiving:** Capstone's inbound scheduling and receiving platform provides real-time dock/receiving visibility; a documented deployment of the same solution improved on-time performance by 80%+ and delivered \$647K in annual savings.
- **Yard Management System:** Contribute to RFID/trailer tracking, check-in/out, dock coordination, and real-time yard visibility workflows integrated with Managed Receiving.

CORE EXPERTISE

Angular & Front-End Architecture

Reusable UI patterns, shared libraries, scalable RxJS design, complex forms and data-heavy interfaces.

Technical Leadership

Feature analysis, technical design, estimation, code review, mentoring, technical decisions and developer unblocking.

Performance & Quality

Performance architecture, 60-70% load-time gains, accessibility, maintainability and automated testing.

AI-Augmented Engineering

Custom agent workflows/skills, multi-agent delegation, prompt engineering, model evaluation and verification gates.

Delivery & Collaboration

Agile/Scrum, U.S. clients, Product/QA/UX/.NET collaboration and Azure DevOps.

TECHNICAL SKILLS

Front-End & UI

Angular (through v20) • TypeScript • JavaScript • RxJS • HTML5 • CSS3/SCSS • Angular Material • Bootstrap • Tailwind CSS

Architecture & State

Reusable components • Shared libraries • NgRx • Akita • BehaviorSubject • Nx monorepo

Testing & Quality

Jasmine • Karma • Cypress • Jest • unit testing • E2E testing • accessibility • responsive design

PROFESSIONAL EXPERIENCE

Front-End Engineer (Angular)

[Miramar Tech](#) | Jan 2019 - Apr 2020 | Remote

- Built [Prio](#), a SaaS product for team and project management, from the ground up using Angular, TypeScript, RxJS, HTML5, SCSS, and Bulma.
- Delivered pixel-accurate scheduling, time-tracking, team-management, project-board, and dashboard modules with reusable components and REST API integrations.
- Collaborated with cross-functional teams to diagnose and resolve 3-5 issues daily while improving application performance and maintainability.

Front-End Engineer (Angular)

[iSky Development](#) | Jan 2018 - Jan 2019 | Cairo, Egypt

- Developed key modules for [ThoroughWorks](#) and a [Portal Management System](#), including dashboards, contacts, product pages, timesheets, and workflow tools.
- Designed responsive layouts and reusable UI components using Angular, Bootstrap, SCSS/SASS, and RxJS.
- Refactored UI modules for better modularity, maintainability, and performance across data-heavy application screens.

PROJECTS

Monyvi - Personal Finance & AI Automation Platform

Personal Project | React Native / Expo, TypeScript, Supabase, PostgreSQL, AI/LLM APIs

- Design and build an offline-first personal-finance application for Egyptian users, covering accounts, transactions, multi-currency tracking, budgets, recurring payments, analytics, and precious-metals holdings.
- Integrated DeepSeek V4 Flash through DeepInfra for structured SMS-to-transaction parsing and Gemini 2.5 Flash-Lite for multilingual voice/audio-to-transaction parsing, with structured outputs, retries, validation, provider configuration, and failure handling.
- Created repository-level AI development workflows and reusable skills for architecture, planning, TDD, code review, PR follow-up, UI/mockup implementation, session/context handoff, and multi-agent task delegation with scoped ownership and verification gates.
- Built and refined AI-assisted engineering processes using Claude Code, OpenAI Codex, OpenCode, DeepSeek, Qwen, Grok, Antigravity, and Copilot, while retaining human review and automated verification gates.
- Implemented and maintained CI/CD workflows for the project using GitHub Actions and repository automation practices.

EDUCATION

B.Sc. in Computer Science

Misr University for Science and Technology
2014 - 2018 | Cairo, Egypt

AI & AGENTIC ENGINEERING

AI Development Tools

Claude Code • OpenAI Codex • GitHub Copilot • OpenCode • DeepSeek • Qwen • Grok • Antigravity • Gemini • DeepInfra

LLM Integration

Structured outputs • provider abstractions • retries/failure handling • prompt design • model evaluation • AI workflow customization

BACKEND & DATA

Node.js • Express.js • Supabase • PostgreSQL • MySQL • SQL Server • Firebase • REST APIs

DEVOPS & TOOLS

Git • Azure DevOps • GitHub Actions • CI/CD • Nx • Webpack

LANGUAGES

Arabic - Native

English – Proficient
